
BODYGEE
System Integration Overview

Bodygee System Integration Overview

STEP 1

Members synchronization

Add your members to Bodygee system using the Bodygee API (add, edit, delete member)

- You don’t need to add your members manually
- Members are listed before the first scan
- Use your member id to search a member in a Bodygee Application

Member data

- First name, last name, gender, date of birth
- Email address (to enable Client App)
- Unique member id
- Unique location id

STEP 2

Coach App Integration

Open a member result in the Bodygee Coach App by using a member specific link

- Open Coach App out of your application
- Open Coach App, select a Member and display his/her result by using one link only
- Coach App is a web application and can be integrated (web view) or linked within your application

Specific integrations possible upon request

STEP 3

Client App Integration

Redirect your members to Bodygee Client App from your own mobile app

- Open Bodygee Client App out of your own app
- App store can be opened if Bodygee Client App is not installed
- Members are automatically signed-in to Bodygee Client App by using a Access-Token
- Bodygee Client App operates as a separate and independent app

MOTIVATING MEMBERS

MAKING PROGRESS VISIBLE

thank you
